

CIVIL ENGINEER DRAWINGS DENOTING THE FOLLOWING:

1. The pad level of the lot is shown as a number inside a black box within the respective lot
2. The retaining walls are shown in purple with the height of the retaining wall stated in the notation "RH 0.6"
3. The driveway locations have been nominated on the low side of the block in the attached as this is common building practice; this would mean that future services, e.g drainage outlets would be proposed outside of the driveway location.
